Result 8 00000

The present sequence encodes an oxidase which is derived from a microbe and converts a heteropolycyclic aromatic hydrocarbon to a benzoic acid homologue. The oxidase is used in a method for the removal of dioxin in which dibenzo-p-dioxin is converted to a diphenyl ether triol Oxidase gene derived from a microbe for removal of dioxin - converts hetero:poly:cyclic aromatic hydrocarbon to a benzoic acid homolog.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence encodes an oxidase which is derived from a microbe and converts a heteropolycyclic aromatic hydrocarbon to a benzoic acid homologue. The oxidase is used in a method for the removal of dioxin in which dibenzo-p-dioxin is converted to a diphenyl ether triol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          154 ccedreargritricakaadagaricdacdagegegeccaagccaagcacrakkacrecteger

```

The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance to a plant to becreate it fundamental infection. The present sequence was used to illustrate to a plant to becreate the conferring resistance to resistance or tolerance to a plant to becreate the conferring resistance to resistance or tolerance to a plant to becreate the conferring resistance to resistance to a plant to becreate the conferring resistance to resistance or tolerance to a plant to becreate the conferring to the conferring resistance to resistance or tolerance to a plant to be the conferring to the conferring the conferring to the conferring th

corganism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational carging discovery programs, or for screening homologous nucleic acids acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did proximation format directly from WIPO at the printed specification, but was obtained in electronic format directly from WIPO at the printed pocification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1129 redchrcecedeceahdaaagechececrecedeedeardadeedaderecredidaarg 1188

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid.

(1) a vector is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated propertied or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation required for cellular proliferation or the biological pathway in which a proliferation required for cellular proliferation or the pathway in which a proliferation or the inhibits proliferation of an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              214 RYSKTSYYGGSYGGSYGKKYMSKSCSMRMTGSSWGSCCYTCYYGAMCWSCCMSMMYMGS 155

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibite proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) an bost cell containing the vector; (3) an isolated complete acid; (4) an antibody capable of specifically binding the polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting callular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of required for proliferation, or that has an activity against a biological pathway in which a proliferation-required gene product is solutioned for cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a computed for proliferation or underexpressed; (12) determining the extent or which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening for homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumonlas or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did controlic format directly from MIPO at the printed specification, but was obtained in the printed specification, at the printed specification, or the printed specification, at the printed specification, and the printed specification, an
                                                                                                                                                                                                                                 New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

The present sequence is given in a specification relating to a method for screening a library of mutants. The method comprises constructing a library with insertions in genes and/or regulatory regions of the corganisms of interest, where the insertion contains a tag and/or a transposon associated with a tag. The mutants are identified by the hybridiation of the tags to known sequences. The method is useful for treating an individual suffering from a mycobacterial infection, consisted of being infected with a Mycobacterium, or having been exposed to an infectious Mycobacterium. It is also useful for identifying and cisolating mutants of actinomycetales and for identifying compounds that microalium Mycobacterium, or having been exposed isolating mutants of actinomycetales and for identifying compounds that microalium machines are secured of identifying and cisolating mutants of microalium, m. intracellulaire and M.

W. bovis, M. leprae, M. avium, M. intracellulaire specific conditions. It is especially useful for identifying loci involved in pathogenicity. It is constructing vaccines. The method can be used to screen the multiple libraries concurrently. It can screen libraries of different
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  3716 cdcradanahanckodocahdodochkododrackordrhacrantodarahockodocododd 3775

The present invention relates to a method (MI) for identifying genes involved in plant resistance or response to pathogenic infection. MI comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction infection, or in a corresponding incompatible or compatible interaction. (MI) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GCCAAAGGICTIATCTTCGITTAC - GTAGGCGACGCGAACCAACGCCGCTTATCGAAG 442

nucleic acid, (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisence nucleic acid; (4) an antibody capable of specification of the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a gene in an operon required for proliferation, or that has an activity against a biological pathway the gene product or that has an activity against a biological pathway in which a proliferation, or that inhibits cellular proliferation, (8) identifying a gene required for required gene or its gene product lies or agene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids required for cellular proliferation or soreening for homologous nucleic acids required for cellular proliferation of the screening for homologous nucleic acids required for cellular proliferation of the screening for homologous nucleic acids required for the contraction of the contraction of the contraction of the contraction of the compound that inhibits of the contraction of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       405
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                726
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        465
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, R. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 786
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             525

2003-029926/02 WPI; 2003-029926 P-PSDB; ABU33695 New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

Claim 14; SEQ ID NO 25435; 1766pp; English.

The invention relates to an isolated nucleic acid comprising any one of the invention relates to an isolated nucleic acid comprising any one of the nucleic acid inhibite proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid condaining the vector; (3) an isolated or les fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding collypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the agene product or that has an activity against a biological pathway required for proliferation, or that that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation of the biological pathway in which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound; a activity; (11) a culture comprising strains in which the gene product is compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a product is everexpressed or underexpressed; (12) determining the extent compound; as activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent compound that inhibits the proliferation of an organism or screening for homologous nucleic acids required for callular proliferation of an organism. The antisense nucleic acids are useful for for actional contracts and accounted to the proposed and accounted acids required for accounted accounted action of an expension of an organism or screening for homologous nucleic acids required for accounted account drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurlum, K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pct_sequences

/note="Vector: pBluscript SK-; Site_l: EcoRI; Site_2:
Xhol; Toxoplasma RH strain tachyzoites were grown in human forceskin fibroblast cultures in vitro. The library was originally constructed by K.L.Wan, Cambridge University.
CDNAs were synthesized from polyA RNAs by oligo d(T)
priming and directionally cloned into the EcoRI to Xhol sites of the Lambda ZapII vector using the ZAP-cDNA synthesis kit (Stratagene). The primary CDNA library was mass excised as phagemid using ExAssist helper phage (Stratagene). Phagemid DNA was extracted by phenol-chloroform method, and Mybridized against a pool of highly abundant genes which were derived from short cycle PCR of the primary cDNA library. The normalized library was electroporated into DH10B (GeneHog, Invitrogen, Inc).
WARNING: the library contains a small percentage of cDNAs derived from the human host cells."

Determination of this BAC-end sequence was carried out as part of a collaboration with the Ruropean Drosophila Genome Project (ENGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre Inbrary (Dros BAC) was wade by Alain Sillaud at CEPH (Centre Project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GGTTGCTGCGGGCAAGCCCAAAGGTGTTTACGATCTGCTTGGCGAGCATTCGGTGCCGGT 707

Patent No. 6551795

GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERGIGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERGIGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-07-18
PRIOR FILING DATE: 1998-07-27
NUMBER: OS 60/094,190
PRIOR FILING DATE: 1998-07-27
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2236
